

Worksheet 3: Reformulating hypotheses into research questions

We can define a hypothesis as an assumption / prediction about the future answer to a previously formulated research question. Below are some examples of research hypotheses. Try to assign one research question to each hypothesis.

Hypothesis: Students entering the labor market have an insufficient level of social and personal competences.

Research question: _____

Hypothesis: Multilevel governance in the European Union does not work when the pace of integration slows down and crises appear.

Research question: _____

Hypothesis: Women who have experienced sexual assault in the past have greater confidence in the police.

Research question: _____

Hypothesis: There is a relationship between the family type and the level of aggression as children from dysfunctional families show a higher level of aggression.

Research question: _____

Hypothesis: Employees' identification with the mission and vision of the organization fosters a sense of job satisfaction.

Research question: _____

Hypothesis: The longer the service, the more often employees of the “Computers and Telephones” enterprise complain about the feeling of professional burnout.

Research question: _____
